ABOUT ME

Computer Engineer with hands-on training in both Quality Assurance and Data Science & Machine Learning. I enjoy working across both fields — testing software and building data models — and I bring attention to detail and a problem-solving mindset to everything I do.

WORK EXPERIENCE

GGateway & IBT Learning [2026]

Data Science & Machine Learning Internship | Online

- Performed data cleaning, analysis, and visualization using Excel and Power BI, building interactive dashboards to present insights.
- Conducted Exploratory Data Analysis (EDA) to identify patterns, outliers, and correlations in datasets.
- Manipulated and analyzed data using Python (Pandas, NumPy, Matplotlib) and extracted insights from relational databases using SQL.
- Built and evaluated Machine Learning models including Linear Regression, Logistic Regression, Decision Trees, and K-Means Clustering.

AHL Logics [2024]

Quality Assurance Training | Hebron

- Developed and executed test cases for saucedemo.com using Python and Selenium WebDriver.
- Utilized Postman for API testing, sending HTTP requests (GET, POST, PUT, DELETE).
- Generated Allure reports to summarize testing results and uploaded test cases to GitHub.

PROJECTS

Movie Watchlist App https://github.com/saraallan8/movieapp

Developed a cross-platform mobile app that allows users to search, save, and manage a personal movie watchlist with genre-based categorization and multi-filter search, storing data locally using SQLite and handling various edge cases for a smooth user experience.

Technologies: Dart (Flutter framework) & SQLite

E-Commerce Test Automation Project https://github.com/saraallan8/Final_Project

Collaborated with a partner to develop and execute automated test cases for saucedemo.com, covering core user flows such as login, purchase, and logout, alongside API testing to validate backend endpoints, with all contributions managed and merged via GitHub.

Technologies: Python, Selenium & Postman

Cardiovascular Disease Prediction https://github.com/yousefghawi/Cardiovascular-disease-capstone-project

Built a binary classification model to predict cardiovascular disease risk based on patient medical and lifestyle data, enabling early detection to support better clinical decisions and preventive care.

Technologies: Python, EDA & Machine Learning

EDUCATION

Palestine Polytechnic University Hebron, Palestine

BSc of Computer Systems Engineering

August 2018 – May 2023

SKILLS

Programming Languages: C++, Java, Dart, Python

Methodologies: Object Oriented Programming (OOP)

Tools: Git, GitHub, Postman, Selenium, Power BI, Excel, EDA & Machine Learning

Soft Skills: Work under pressure, Teamwork, Time management, very good learning ability

ADDITIONAL INFORMATION

Languages: Arabic (Native), English (Intermediate)
